

Container Terminal Operating System

We aim to simplify your operations

Our Track Record

- ✓ | Over **20 installations** worldwide.
- ✓ | From **75,000 TEU** to **750,000+ TEU** container facilities.
- ✓ | **Marine** and **inland container terminals**, both greenfield and brownfield.
- ✓ | Equipment capabilities include **ship-to-shore cranes**, **mobile harbour cranes**, **straddle carriers**, **reach stackers**, **RMGs**, **RTGs**, **trucks** - and many more.
- ✓ | Integration with **ERP**, **EDI**, **Port-Centric solutions** and more.
- ✓ | Seamless integration with our **Bulk/Break Bulk TOS solution**.

"Autostore gives us the control, agility, oversight and traceability we need to cut costs, improve efficiency and optimise our supply chain".

SCA Logistics AB / Rotterdam

"Average attended man-hours for yard labour cut by 42% and average productive lifts per man-hour increased by 82%".

Associated British Ports / UK

"TBA offer us quality, flexibility and depth of capability: fast and accurate container management - our keys to competitiveness and improved customer service".

Lyon Terminal / France

Autostore in a nutshell

TBA's Terminal Operating System (TOS) allows you to control the movement and storage of various types of cargo in and around a container terminal or port. The system enables you to make better use of your assets, labour and equipment, plan your workload and receive real-time information that enables cost-effective, improved decision making.

- ✓ | **Flexible:** scales easily to support the most complex and ambitious business objectives.
- ✓ | **Proven:** installed worldwide, Autostore is the TOS solution of choice for dynamic port operators.
- ✓ | **Power:** easy-to-use Windows platform that's highly-configurable for peerless, terminal-wide control.

Simplifying your container operations

- **Designed around your users**

We believe user-friendly software improves the productivity and performance of people and equipment. Our software is designed by user interaction experts, working closely with our expanding user network to deliver continuous improvement that simplifies your operations.

- **Getting the most out of your terminal**

Our TOS is designed to deliver significant operational improvements. That's why we include KPI measurements in our GAP analysis that maintains the focus of both TOS configuration and its implementation.

- **Implementation process is the key to success**

TOS implementation impacts upon your whole organisation - how people work and the processes they use. Extensive GAP analysis maps every process on your site and shows the impact on the work per person. Identifying the workflows improves training and user acceptance, in turn streamlining operational processes and performance.

Mission

Simplify ports, terminal and warehousing operations. Enabling every client to perform safely and efficiently.

Vision

We offer integrated, logistic solutions for the entire lifecycle for ports, terminals and warehouses. Solutions that work from small to large operations either manual or automated.

Values

Success, Together, Committed, Honest, Groundbreaking
